EXPLAINED KARUR TRAGEDY

Why stampedes happen

There is a pattern in several of the stampedes that India has seen recently. Delays in rescue efforts because of the crowd size and the inability of first responders to wade in often worsen the death toll

ANIL SASI
NEW DELHI, SEPTEMBER 28

AS THE death toll mounts in Karur, where a rally by Tamilaga Vettri Kazhagam (TVK) president and actor Vijay saw a stampede on Saturday, there is a familiar script to how the incident unfolded.

More than crowds thronging to an event, a specific trigger — in this case people climbing on to a tree behind Vijay's van and then falling off into the crowd, setting off a crush — and the resultant panic lead to a stampede. Delays in rescue efforts, because of the crowd size and the inability of first responders to wade in, further contribute to the toll.

In south India, political rallies tend to trigger overcrowding, especially given the number of film actors that have transitioned into politics. The heady mix of star power and politics makes it difficult for authorities to restrict crowds to manageable levels.

In the Karur case, while the investigation is underway, there does seem to have been an element of inadequate planning for the crowd size. Delays at the event likely contributed to the deadly crush.

The instances of stampedes in India typically unfold at places of worship, sporting events, railways stations, and at large-scale gatherings, such as the Maha Kumbh. Nearly 90 people are reported to have lost their lives since the beginning of this year in such event-linked crushes.

Rallies, sporting events, railway stations

Just over three months ago, in June, the RCB victory celebration of the team's IPL win led to a stampede near the approach road to Chinnaswamy Stadium in Bengaluru, with at least a dozen lives being lost.

The likely trigger included lack of planning, coordination issues, indecision over allowing a victory parade and rumours of free passes, something that the cricket authorities had subsequently denied. Karnataka Chief Minister Siddaramaiah said in his comments just after the incident that the police failed to estimate the size of the crowd that gathered outside the stadium.

In early May, multiple people were killed in a stampede in Goa's Shirgaon village, where devotees had gathered in a religious yatra at Shree Lairai Devi Temple.

Tamilaga Vettri Kazhagam (TVK) chief and actor Vijay at the gathering before the stampede in Karur on Saturday. TVK/ANI

Earlier in February, 18 people died and scores were injured in a stampede late in the night as Kumbh pilgrims tried to board a Prayagraj-bound train at the New Delhi Railway Station.

Minister of Railways Ashwini Vaishnaw informed the Rajya Sabha in August that a big headload from one of the passengers fell into the crowd, leading to the stampede. The Railways said many of the passengers were carrying big headloads, affecting smooth movement on the FOB, and the headload of one passenger falling off resulted in people tripping on the stairs. Passengers then fell on each other, triggering the stampede.

On January 29, 30 people were killed and over 60 injured in an early morning stampede at the Sangam area of the Kumbh as pilgrims rushed to the river to take a dip on the occasion of Muni Amavasya, an auspicious day in the Hindu calendar. Inadequate crowd control measures were cited as part of the reason for the incident.

High event/death rates

According to the National Crime Records Bureau's (NCRB) report titled 'Accidental Deaths and Suicides in India,' from 2000 to 2022, 3,074 lives had been lost in stampedes.

Nearly 4,000 stampede events have been recorded over the last three decades. The NCRB has been collecting data on stampede incidents across India since 1996.

Not that such events do not happen elsewhere. In 2022, Halloween celebrations in South Korea resulted in a stampede while in Germany, in 2010, a devastating "Love Parade" crush unfolded.

The difference, though, is that these events typically are not allowed to recur, as authorities learn from the odd incidents and put in place remedial measures.

However, it needs to be mentioned that in India, the scale of all these events is always much larger than in most other parts of the world. Another issue is a general disregard towards rules and regulations, which is a societal phenomenon in India.

According to Anna Sieben, a professor at the University of Wuppertal in Germany who has been researching crowd dynamics, a big problem is that people in such events often do not realise anything is wrong until it is too late.

Sieben, a social and cultural psychologist who uses experimental methods as well as qualitative interview, observation and archival data in her work on crowds and

pedestrians, has said that "individuals in crowds often communicate and orient themselves through non-verbal cues, such as body language", and that it has been convincingly shown that "mental states in crowds do not spread like wildfire, but emotions actually change depending on the situation and the behaviour of others".

That transmission happens faster if the crowds are densely packed in, given that the sense of personal space is a lot more negotiable in India than elsewhere in the world. Also, in a stampede, while some people might die due to trampling, a bigger trigger is compressive asphyxia, where pressure on the rib cage due to the sudden crush leads to impaired breathing. The initial cause is invariably asphyxia.

But then someone may stumble and fall, resulting in a domino effect and others falling on top of the people who are down, which could then lead to more deaths on account of trampling.

A tightly packed gathering is a recipe for disaster, especially if the authorities have underestimated the crowd sizes or are ill-prepared to tackle a localised crush, which can then spread outwards in a gathering. That does seem to have been the case in Karur.

Why stampedes happen

Source: The Indian Express

Page No.: 23 (Explained)

GS Paper: GS-3 (Disaster Management)

Context:

In Karur, Tamil Nadu, a rally organized by actor and politician Vijay's party (TVK) turned into a tragedy when uncontrolled crowd movement led to a stampede. This is not an isolated case - in the past year, India has witnessed similar deadly incidents at religious gatherings, political rallies, railway stations, and sporting celebrations. These stampedes highlight poor planning, overcrowding, and delayed rescue as common reasons behind such disasters.

Answer Writing Enrichment:

- Use data points: NCRB (3,074 deaths btw 2000- 2022), nearly 4,000 in 3 decades.
- Recent incidents (Karur, Bengaluru, Delhi, Goa) as examples.
- Global cases (Germany 2010, South Korea 2022) for comparative perspective.
- Sendai Framework for Disaster Risk Reduction (2015-2030) - preparedness, mitigation, resilience.

UnderStand UPSC

Reasons for Stampedes:

1. **Sudden Triggers:** A fall, push, or rush leading to panic and crushing.
2. **Overcrowding:** Rallies, religious congregations, railway stations, and sporting events.
3. **Inadequate Planning:** Poor design of entry/exit routes, absence of regulated movement.
4. **Delayed Rescue Response:** Dense crowds hinder access for first responders.
5. **High-Emotion Gatherings:** Celebrity rallies and religious devotion intensify disorder.
6. **Lack of Enforcement:** Weak crowd-cap policies, inadequate policing, and coordination failure.

Possible Solutions:

1. **Capacity Regulation:** Enforce strict limits on crowd numbers based on venue size.
2. **Design & Flow:** Separate entry and exit routes, one-way pedestrian flow, barricades to prevent bottlenecks.
3. **Technology Use:** Real-time monitoring with CCTV, drones, and AI-based density mapping.
4. **Communication Systems:** Public announcements and signage to guide and calm crowds.
5. **Trained Personnel:** Deployment of marshals, volunteers, and police for crowd direction.

6. **Emergency Preparedness:** Quick-access paths, medical stations, ambulances, and mock drills for readiness.
7. **Regulatory Enforcement:** Event organizers made accountable for safety audits and compliance.

Global best practices

- **Germany (post-2010 Love Parade):** Strict crowd-density norms.
- **South Korea (post-2022 Halloween):** Real-time density monitoring, police deployment.
- **Saudi Arabia (Hajj management):** Staggered entry, timed movement.
- **UK (sports events):** All-seater stadiums, emergency exits mandated.

Analysing Indian States' macro-fiscal health

In the 2010s, States were able to prosper economically through reforms, better tax collection, and booming growth. Some States even reported surpluses. But the pandemic was a turning point — tax revenues shrank while emergency spending soared, pushing almost every State back

ECONOMIC NOTES

Deepanshu Mohan

When India's national auditor, the Comptroller and Auditor General (CAG), released a decadal analysis on States' macro-fiscal health, one headline somehow travelled faster than anything else highlighted in the study — Uttar Pradesh, long labelled as a backward State lagging in fiscal performance, was said to have recorded a revenue surplus of ₹37,000 crore.

This number, which is more than double of Gujarat's surplus, was hailed as proof that India's most populous State had turned a corner. However, by merely focussing on the number, one missed the bigger picture. Narrowing down on just arithmetic surpluses may be limiting analytical interpretation if not studied more holistically with the form, operational mechanics and choices made for a State's governance.

Economists often urge higher capital spending for growth, while keeping routine costs in check. These numbers decide whether one's neighbourhood hospital has new ventilators; whether a school gets enough teachers; and whether village roads will be repaired this year. India's States run some of the largest budgets in the world — bigger in real terms than many countries. Cumulatively, owing to the constitutional separation of powers, they spend more than the Union government on health and welfare. One must ask though: do States earn enough to pay their bills? Or are they borrowing?

Uneven revenue

In the early 2000s, States were often deep in deficit, spending much more than they earned. Reforms, better tax collection, and booming growth helped many turn the corner by the late 2010s, with a few even reporting surpluses. But the pandemic was a turning point — tax revenues shrank while emergency spending soared, pushing almost every State back. Today, the picture is mixed. While some States appear comfortable, much of their stability rests on volatile sources such as lotteries, mining royalties or land sales.

India's States inhabit starkly different fiscal worlds, much like its diverse ethno-linguistic identities. Maharashtra raised nearly 70% of its receipts internally in 2022-23, while Arunachal Pradesh managed only 9%. Uttar Pradesh, despite a surplus, generated just 42% on its own, relying on Union transfers. In economic terms, this is referred to as a vertical imbalance — rich States fund themselves, while poorer ones lean on Delhi.

Kerala's lottery industry earned nearly ₹12,000 crore in 2022-23; Odisha drew 90% of its non-tax income from mining royalties; and Telangana sold land worth ₹9,800 crore. However, lotteries hinge on sales, royalties on global prices, and land can't be sold twice.

Gross debt borrowings

Let's analyse the numbers from the CAG's decadal analysis report. When States spend more than they earn, they tend to borrow more. They finance that deficit mainly through loans or bonds that must be repaid with interest. The CAG, through its audited State Finances reports, brings us a consolidated national picture, while the RBI's State Finances: A Study of Budgets report provides a consistent framework for comparison. Taken together, these sources show that borrowing patterns between 2016-17 and

How much are States borrowing?

The CAG's decadal analysis report shows us that the pandemic spiced the borrowing

Source: CAG, GOI, State Finances 2022-23, RBI, GOI, State Finances: A Study of Budgets, 2023

2022-23 have diverged sharply in India.

Table 1 deals with States such as Andhra Pradesh, Arunachal Pradesh, Assam, Bihar, Chhattisgarh and Goa. Andhra Pradesh tripled its borrowings to ₹1.86 lakh crore, while Bihar doubled it, making debt a routine tool even for poorer States. By contrast, Goa kept a tight lid on borrowings, standing out as a rare conservative. Yet the liabilities data shows the weight of these choices.

Andhra Pradesh's debt load swelled to 38% of its Gross State Domestic Product (GSDP) by 2023, and Bihar's hovered around 39%, among the highest in India. Assam's rapid borrowing was cushioned by growth, with liabilities easing slightly by 22% of GSDP, while Goa stayed at 27%, still high for a small State.

Table 2 deals with Gujarat, Haryana, Himachal Pradesh, Jharkhand, Karnataka, Kerala, and Madhya Pradesh. Here, borrowings rose in a measured but persistent way. Haryana jumped from ₹28,170 crore in 2016-17 to ₹80,449 crore in 2022-23, nearly tripling its borrowings despite being one of the richer States; its liabilities also climbed to about 31% of GSDP. Gujarat moved gradually upward, from ₹27,668 crore to ₹52,333 crore, while keeping its debt burden steady near 19-20% of GSDP. Madhya Pradesh also almost doubled its borrowings, from ₹29,847 crore to ₹58,867 crore, with liabilities rising to around 29%.

The pandemic brought volatility. Karnataka's borrowings spiked to ₹84,549 crore in 2020-21, before being cut back to ₹44,549 crore; even after retrenchment, its liabilities stood close to 28% of GSDP.

Table 3 showscases Rajasthan, Sikkim,

THE GIST

India's States inhabit starkly different fiscal worlds, much like its diverse ethno-linguistic identities. Maharashtra raised nearly 70% of its receipts internally in 2022-23, while Arunachal Pradesh managed only 9%. Uttar Pradesh, despite a surplus, generated just 42% on its own, relying on Union transfers.

While some States show surpluses, in reality, they lean heavily on central transfers, off-budget loans, and delayed GST compensation. A lot of these States aren't sufficiently spending on welfare priorities.

Manipur's borrowings grew from ₹1,551 crore to ₹11,116 crore; Meghalaya from ₹1,210 crore to ₹6,221 crore; Mizoram from ₹756 crore to ₹4,019 crore; and Nagaland from ₹5,444 crore to ₹7,159 crore. Though small in absolute numbers, these States carry some of the heaviest burdens.

Analysing Indian States' macro-fiscal health

Source: The Hindu | Page 8

CS Paper: GS-3 (Economy), GS-2 (Federalism)

Context (Simple):

The CAG report shows that while States' tax revenues have improved after the pandemic, emergency spending and rising borrowings have put fiscal health under pressure. Some States report surpluses, but in reality, many are running heavily on debt.

Charts Summary:

- Gross Borrowings: Sharp rise across all States; Rajasthan, Tamil Nadu, Maharashtra, Karnataka among the highest.
- Liabilities as % of GSDP: Punjab, Rajasthan, Bihar remain at the top (~40%); Uttar Pradesh shows some improvement.
- Borrowings as % of GSDP: Rising fast in Haryana and Rajasthan; Kerala remains consistently high.
- Overall: All major States have borrowed far more in 2022-23 compared to 2016-17.

Insight:

- A few States (like UP) improved debt ratios, but overall borrowings remain high.
- Post-COVID welfare spending and weak revenue buoyancy increased dependence on debt.
- Fiscal discipline and debt sustainability are urgent priorities.

No ceasefire, Maoists must give up arms, says Shah

The Hindu Bureau
NEW DELHI

Union Home Minister Amit Shah on Sunday ruled out a ceasefire with the Maoists, while stating that a "red carpet" awaited those who gave up arms. Reiterating that "violent Naxalism" would be eradicated by March 31, 2026, he stressed that confronting the ideology behind the movement was essential for complete success.

Referring to a purported letter by the banned Communist Party of India (Maoist), which surfaced earlier this month, Mr. Shah said, "They recently attempted to create confusion by issuing a letter, claiming that they want to surrender. There will be no ceasefire. Give up your arms if you want to surrender. You will be rehabilitated."

He was addressing a summit on "Naxal-Mukt Bharat: ending red terror under PM Narendra Modi's leadership", organised by the Dr. Syama Prasad Mookerjee Research Foundation.

Mr. Shah said that when the government had launched Operation Black Forest against the outfit, Left parties demanded it be stopped. "Why don't they and NGOs show the same sympathy and sensitivity towards the victims of Naxal violence," he asked. He added that those spreading the "falsehood" that lack of development was the primary reason behind the spread of left-wing extremism were "misleading" the country.

"We all know that when our country got Independence, resources were limited, and not all regions could develop simultaneously. However, the situation today is starkly different. I ask the leftist intellectuals who support this movement: who is responsible for preventing development in places like Bijapur and Sukma in Chhattisgarh?" he said.

Mr. Shah said arms supply to the banned outfit had been reduced by 90% since 2019, with agencies such as the ED and the NIA cracking down on financial resources. Loopholes in security were addressed by setting up fortified camps, strengthening intelligence-sharing, enhancing capacity, and improving coordination between Central and State forces.

No ceasefire, Maoists must give up arms, says Shah

Source: The Hindu Page No: 10

GS Paper: GS-3 (Internal Security, Left Wing Extremism)

Context:

Union Home Minister Amit Shah ruled out any ceasefire with Maoists and reiterated that "violent Naxalism will be eradicated by March 31, 2026." He said those who surrender will be rehabilitated, but the government will continue strong action against the banned CPI (Maoist) and its supporters.

Government Measures to End Naxalism (Point-wise):

1. Arms Supply Cut:

- Arms supply to banned outfit reduced by 90% since 2019.
- Agencies like ED (Enforcement Directorate) and NIA cracking down on financial networks.

2. Security Strengthening:

- Fortified camps set up in vulnerable areas.
- Enhanced intelligence-sharing across agencies.
- Improved coordination between Central and State forces.

3. Military & Policing Operations:

- Launch of Operation Black Forest to root out Maoist presence.
- Continuous offensives instead of ceasefire.

4. Counter-Ideology Efforts:

- Focus on defeating the ideological narrative of Maoism.
- Highlighting how development has reached most regions, countering the claim of neglect.

5. Rehabilitation Approach:

- Maoists who surrender will be given a "red carpet" welcome and rehabilitated into society.

At UNGA week, India signals realignment with the Global South

NEWS ANALYSIS

Suhasini Haidar
NEW DELHI

India stepped up its engagement with the Global South quite visibly during External Affairs Minister S. Jaishankar's hectic consultations at the United Nation's 80th high-level week, with strong criticism of Israel's war on Gaza, U.S.-led trade turmoil, and the lack of UN reform in focus in statements.

More than half of his approximately 30 one-on-one bilateral meetings with Foreign Ministers were with countries of the developing nations, while nearly all the multilateral meetings India hosted or Mr. Jaishankar hosted focused on the Global South's issues, and non-western groupings.

The multilateral meetings included the BRICS, IBSA (India-Brazil-South Africa), India-CELAC

(South American countries), India-SICA (Central American Integration System), FIPIC (Pacific Island countries), L-69 (developing countries from the Global South) and C-10 (African Union representatives) and the High-Level Like-Minded countries of the Global South".

Pharma tariffs

Some of the focus on the Global South may have come, suggested analysts, from disappointment with the U.S.'s actions this week. Mr. Jaishankar held a meeting with U.S. Secretary of State Marco Rubio at the beginning of the week, but there was no let-up in the U.S.'s rhetoric and actions against India.

A day after the meeting, President Donald Trump called India and China the "primary funders of the war" in Ukraine, and repeated his claim that he ended the India-Pakistan conflict. In addition to 50% tariffs on Indian goods,

Strong stand: S. Jaishankar addressing the United Nations General Assembly in New York City on Saturday. AFP

and visa and immigration cuts that affect Indian professionals, the U.S. administration also slapped new tariffs on pharma industries this week. Commerce Secretary Howard Lutnick said the U.S. would "fix India" to ensure it opens its markets and cuts trade actions against the U.S., indicating Indian and U.S. negotiators still have a hard road ahead in FTA talks.

Meanwhile, Mr. Jaishankar also met with Australia

Foreign Minister Penny Wong and his Japanese counterpart on the sidelines of other groupings, but there was no Quad Foreign Ministers' meeting, raising questions about whether a date can still be agreed on for the Quad Summit India is due to host this year.

Washington also ruffled feathers in Delhi with its intense engagement with the South Asian neighbourhood. Mr. Trump held 80-minute talks with Pakistan

Prime Minister Shehbaz Sharif and Army chief Field Marshal Asim Munir, even as U.S. Ambassador-designate and Special Envoy for the region Sergio Gor met leaders from Bangladesh, Sri Lanka and Bhutan in New York.

In contrast, Mr. Jaishankar met only counterparts from Sri Lanka and Maldives during the week, even as India and Pakistan sparred at the General Debate.

Gaza situation

A significant shift at the UNGA week was indicated by India's position on the Israel war on Gaza. New Delhi, which has been an outlier from other Global South countries thus far and abstained on resolutions calling for a ceasefire, was instead seen backing a number of statements sharply critical of Israel during the UNGA. These included statements by the BRICS Foreign Ministers and the IBSA Trilateral

Commission, which said the "Ministers expressed grave concern about the situation in the occupied Palestinian territory and strongly condemned the Israeli attacks against Gaza, which, after almost two years, continue to cause unprecedented suffering to the civilian population of the territory, ravaged by deaths, destruction, forced displacement, and famine".

The statements are much tougher than previous statements that India has agreed to being a part of, indicating a greater alignment with Global South priorities on the issue.

Referring to India's commitment to dealing with the "especially acute" "predicament of the Global South" during India's statement at the General Debate, Mr. Jaishankar listed a number of issues they faced: from the conflicts in Ukraine and Gaza, to energy and food security, "non-

market trade practices", tariff volatility and uncertain market access.

"The resource-stressed ones scrambled to survive, only to hear sanctimonious lectures thereafter," he said, in a sharp dig at global superpowers for not doing more for the Global South.

In its 48-point "priority paper", the Permanent Mission of India expressed its disappointment over the lack of movement on UN Security Council reform in the previous session.

It also stressed maintaining "India's active engagement as a leading voice of the Global South", emphasising different areas such as climate finance, development financing, etc, and strengthening coordination with important groups like the Landlocked Developing Countries, Least Developed Countries and Small Island Developing States as well.

At UNGA week, India signals realignment with the Global South

GS Paper: GS-2 (International Relations) | Prelims

Context (1-2 Sentences):

At the 80th UNGA high-level week, India intensified engagement with the Global South, strongly criticising Israel's actions in Gaza, U.S. trade policies, and the lack of UNSC reform. Most of India's bilateral and multilateral meetings focused on non-Western groupings and South-South cooperation.

Multilateral Institutions Discussed in the Article:

1. BRICS

- Founded: 2009 (BRIC), South Africa joined 2010.
- Current Members (10): Brazil, Russia, India, China, South Africa + Egypt, Ethiopia, Iran, Indonesia, UAE.
- Objective: Multipolar world order, economic cooperation, reform of global governance (UNSC, IMF, WB).

2. IBSA (India-Brazil-South Africa Dialogue Forum)

- Founded: 2003, Brasília Declaration.
- Members: India, Brazil, South Africa.
- Objective: South-South cooperation, poverty reduction, sustainable development, UN reform.

3. India-CELAC (Community of Latin American and Caribbean States)

- Founded: 2010
- Members: 33 Latin American & Caribbean countries
- Objective: Regional integration, cooperation with India in trade, energy, technology, and multilateral reform.

4. SICA (Central American Integration System)

- Founded: 1991, Tegucigalpa Protocol.
- Members: 8 - Belize, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama, Dominican Republic.
- Objective: Political, economic, cultural integration of Central America.

5. FIPIC (Forum for India-Pacific Islands Cooperation)

- **Launched: 2014 by India.**
- **Members: 14 Pacific Island countries + India.**
- **Objective: Climate change, sustainable development, capacity building, strengthening India's outreach in Pacific.**

6. L-69 Group

- **Founded: Mid-2000s (named after UN draft resolution L.69).**
- **Members: "42 developing countries across Asia, Africa, Latin America, Caribbean, Pacific.**
- **Objective: Push for UNSC reform and better representation of Global South.**

7. C-10 (Committee of Ten African Union States on UNSC Reform)

- **Founded: 2005.**
- **Members: 10 African Union states - Algeria, Republic of Congo, Equatorial Guinea, Kenya, Libya, Namibia, Sierra Leone, Uganda, Zambia, Senegal.**
- **Objective: Represent Africa's "Ezulwini Consensus" on UNSC reform.**

Q1. AstroSat, India's first dedicated space observatory, was launched in which year?

- (a) 2012
- (b) 2014
- (c) 2015
- (d) 2016

Q2. Which State currently has liabilities exceeding 40% of its GSDP?

- (a) Kerala
- (b) Punjab
- (c) Gujarat
- (d) Karnataka

Q3. The G-10 group represents the demand of which continent for UN Security Council reform?

- (a) Asia
- (b) Africa
- (c) South America
- (d) Europe

Q4. Operation "Black Forest" is associated with tackling which challenge?

- (a) Illegal mining
- (b) Terrorism
- (c) Naxalism
- (d) Drug trafficking

Q5. The recent Karur tragedy in Tamil Nadu was caused by which type of disaster?

- (a) Fire
- (b) Flood
- (c) Stampede
- (d) Earthquake

Astrosat, India's first space observatory, completes a decade among the stars

The Hindu Bureau
BENGALURU

India's first dedicated space astronomy observatory, AstroSat, completed a decade of operations on Sunday.

Ten years ago, on September 28, 2015, the PSLV-C30 (XL) rocket carrying AstroSat lifted off from the Satish Dhawan Space Centre in Sriharikota. Though the designed mission life of AstroSat was five years, it continues to provide valuable data.

In the last decade, the multi-wavelength space observatory with five payloads aboard has made major interesting discoveries.

Commemorating the milestone in a post on X, the Indian Space Research Organisation said, "On this day 10 years ago, AstroSat, India's first multi wave-

Keen explorer: Though the designed mission life of AstroSat was five years, it continues to provide valuable data.

length astronomy observatory was launched by ISRO. From black holes to neutron stars, from the nearest star Proxima Centauri to first time detection of FUV photons from galaxies 9.3 billion light years away, AstroSat enabled groundbreaking insights across the electromagnetic spectrum from UV/Visible to

high energy X-rays. Congratulating AstroSat for a successful decade and wishing many more years of exciting results and discoveries."

Five payloads

AstroSat was designed to observe the universe in the visible, ultraviolet, low and high energy X-ray regions

of the electromagnetic spectrum simultaneously with the help of its five payloads.

The five payloads are the Ultra Violet Imaging Telescope (UVIT), Large Area X-ray Proportional Counter (LAXPC), Cadmium-Zinc-Telluride Imager (CZTI), Soft X-ray Telescope (SXT), and the Scanning Sky Monitor (SSM).

Collaborative effort

Astrosat was realised by the ISRO with the participation of all major astronomy institutions, including the Inter University Centre for Astronomy and Astrophysics, Tata Institute of Fundamental Research, Indian Institute of Astrophysics, and the Raman Research Institute (RRI), some universities of India and two institutions from Canada and the U.K.

Objective:

- India's first multi-wavelength space observatory to observe the universe in UV, visible, low & high energy X-ray regions.
- Provide simultaneous data from different bands of the electromagnetic spectrum.
- Enable Indian astronomers to collaborate globally in frontier space science research.

Key Findings / Achievements:

- Black holes to neutron stars: Provided valuable data on high-energy astrophysical phenomena.
- Exoplanets & Stars: Observed the nearest star Proxima Centauri.
- Galaxies: Detected far-ultraviolet (FUV) photons from galaxies 9.3 billion light years away.
- Enabled first-time observations across UV to X-ray spectrum simultaneously.
- Helped in understanding star formation, supermassive black holes, and galaxy evolution.
